Read This Before Placing Your Order

When buying trees it is very important to know something about the stock you intend to plant. We have all seen **profitable and unprofitable** trees, as well as profitable and unprofitable cows. The value of a calf is largely governed by the producing ability of its parents. The value of pecan trees for your orchard planting is in their producing ability, which is the same as the stock, or trees, from which these nursery trees are propagated. It is therefore as important as to investigate the history and production of a milk cow from which you would start a dairy herd. Our orchards, from which we cut our grafting wood, have proven to be the most profitable of any commercial orchards in the Gulf Coast region, and as far as we can learn, in the pecan belt. One Success tree planted 20 years yielded 330 pounds in 1925.

Another Matter of Importance

is to know that varieties are true to name. By propagating from heavy bearing orchards we reduce the chance of an error to the minimum. Scions from our orchards are sought by those who wish to grow profitable pecan trees. The pedigree of any tree or animal shows the source from which it springs. If there are any trees that have as good a lineage as ours, we know they are as good as any grown. Plant the best only.

Trees From Our Nurseries Have the Best Roots

therefore, live and grow off well, especially as they receive careful handling and protection from sun and wind when dug. We feel sure that there are no more profitable orchards in existence than those grown from our trees. We believe our prices are as low as is consistent with the quality of our stock. Repeated orders from our old customers are our best recommendations.
